Abstracts

Industrial insulators are used to create air gap for ensuring an effective insulation between two or more conductors. Insulators form an integral part of transmission and distribution and help in resisting stresses as well such as against heat, cold, and contamination.

According to our (Global Info Research) latest study, the global Industrial Insulators market size was valued at USD 6147.1 million in 2022 and is forecast to a readjusted size of USD 7445.4 million by 2029 with a CAGR of 2.8% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Modernization of outdated transmission and distribution (TandD) technology in developed nations along with the adoption of renewable power across the globe are some key drivers boosting the growth of market. Industrial insulators form an integral part of TandD infrastructure and are used in substations to provide electrical insulation and mechanical support for various electrical components. Hence, increase in TandD investments and the installed TandD line length over regions such as Asia-Pacific and North America has also fostered the demand for industrial insulators.
