Abstracts

Interlock Switches are Switches that prevents gear shift lever from moving from park position until brake is applied. It is a switch designed for mounting on a door, drawer, or cover so that it opens automatically when the door or other part is opened. A safety interlock switch is a normally open valve that closes in the event of a process upset. Usually it is attached to electronics that perform logic operations on process conditions. Safety interlock switches are designed to work together with hinged, sliding, or lift-off guards and barriers.

Scope of the Report:

This report focuses on the Industrial Interlock Switches in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The interlock safety switches are designed to provide position interlock detection for moving guards. The actuator is fitted to the moving part (frame) of the guard and is aligned to the switch entry aperture. The interlocking switches have rotary heads which provides ease of mounting and offer different actuator entry positions. Some of the switches can be locked in the protective position which prevents unwanted access to machinery until dangerous operations have ceased. All switches are robust and can withstand severe environments. Depending on the environment where the switch will be used, different material can be chosen.

The worldwide market for Industrial Interlock Switches is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
