Abstracts

An Internet of Things (IoT) Gateway provides the means to bridge the gap between devices in the field (factory floor, home, etc.); the Cloud, where data is collected, stored and manipulated by enterprise applications; and the user equipment (smartphones, tablets etc.). The IoT Gateway, provides a communication link between the field and the Cloud and can also offer local processing and storage capabilities to provide offline services and if required real-time control over the devices in the field.

Scope of the Report:

This report focuses on the Industrial IoT Gateway in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

To achieve sustainable interoperability in the Internet of Things ecosystem today, there are two dominant architectures for data exchange protocols: bus-based (DDS, REST, XMPP) and broker based (AMPQ, CoAP, MQTT, JMI). The protocols that support the information exchange between interoperability domains can also be classified to message-centric (AMQP, MQTT, JMS, REST) and data-centric (DDS, CoAP, XMPP). To use the full potential of IoT, the interconnected devices communicate by using lightweight protocols that don't require extensive CPU resources. A large number of manufacturers are involved in the IoT Gateways design and production as can be seen, for example, at the relevant Intel IoT Solutions Alliance site. Such companies include CISCO, Harman International Industries, Advantech, ADLINK, Supermicro, NXP and others.

The worldwide market for Industrial IoT Gateway is expected to grow at a CAGR of

roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
