Abstracts

The global Industrial Leaded Disk Varistors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Industrial Leaded Disk Varistors are electronic components used to protect sensitive circuits from voltage surges or transients. They consist of a ceramic disk with metal contacts on both sides and a layer of zinc oxide, which acts as a semiconductor material that allows current to flow in both directions but offers high resistance to normal circuit operation. When a transient voltage exceeds a predetermined level, the varistor quickly changes to a low-resistance state, shunting the excess voltage away from the protected circuit.

This report studies the global Industrial Leaded Disk Varistors production, demand, key manufacturers, and key regions.
