Abstracts

The global Industrial Liquid Epoxy Resin market size is expected to reach $ 8292 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Industrial liquid epoxy resins are thermosetting resin raw materials that remain flowable or viscous at ambient or specified processing temperatures. Major product types include bisphenol A-based, bisphenol F-based, epoxy novolac, multifunctional and modified liquid epoxy resins, with key specifications covering epoxy equivalent weight, viscosity, hydrolysable chlorine, total chlorine, moisture and colour. Major upstream materials include epichlorohydrin, bisphenol A, bisphenol F, phenol, formaldehyde, caustic soda, reactive diluents and toughening modifiers. Principal downstream customers include manufacturers of industrial coatings, flooring materials, adhesives, composites, electrical insulation materials, electronic encapsulants, potting compounds and copper-clad laminates. The global capacity in 2025 is estimated at approximately 3.86 million metric tons, with sales volume of around 2.137 million metric tons, an average ex-works price of approximately USD 2,775 per metric ton, and typical industry gross margins of 15%-27%.

The global market currently combines large-scale Asian production with specialty-oriented supply from Europe, North America and Japan. China, South Korea and Taiwan are major manufacturing bases for standard liquid grades, and the availability of conventional bisphenol A-based products remains relatively abundant. Competition in commodity grades is primarily determined by epichlorohydrin and bisphenol A costs, plant utilisation, batch consistency, logistics efficiency and the ability to supply large customers reliably. Although the number of local basic resin producers is more concentrated in Europe and North America, regional suppliers retain advantages in

regulatory compliance, local inventory, technical support and qualified high-performance grades. The result is an increasingly divided market in which commodity margins remain under pressure while differentiated products preserve stronger pricing power.

Demand is gradually broadening beyond conventional flooring and general industrial coatings toward high-performance corrosion protection, electrical insulation, power electronics, vehicle electrification, wind energy composites and structural bonding. Infrastructure maintenance, bridge protection and marine corrosion-control projects provide a relatively stable base of consumption. Electric vehicle high-voltage components, motor insulation, energy storage equipment, data-centre power systems and semiconductor packaging are increasing demand for low-chlorine, high-purity and thermally stable products with consistent dielectric performance. Growth in new wind blade production is becoming more moderate, but larger blades, offshore wind projects, blade repair and the continued adoption of lightweight composite structures support demand for high-performance and toughened liquid resin systems.

From a product-development perspective, low-viscosity bisphenol F grades, low-hydrolysable-chlorine products, low-total-chlorine grades, multifunctional resins, liquid epoxy novolacs and flexible or toughened products are expected to receive greater investment. Electronic and electrical customers increasingly evaluate ionic impurities, colour, viscosity variation, batch consistency and long-term reliability. Consequently, competition in higher-value grades is shifting from the supply of individual resin grades toward combined capabilities in synthesis, purification, application development and customer qualification. Bio-attributed feedstocks, mass-balance certification, lower-carbon energy and manufacturing-emission reductions are also becoming part of major customers' procurement criteria, although suppliers must still balance sustainability claims against cost, performance consistency and commercial availability.

The principal constraints include structural overcapacity in standard grades, volatility in upstream raw-material prices, cyclical demand from construction and general industry, trade remedies, and rising environmental and process-safety costs. Because cured epoxy networks cannot generally be remelted and conventionally reprocessed, the recycling of thermoset composites and formulated systems remains a long-term challenge. Future growth is therefore unlikely to depend primarily on substantial price increases for commodity products. It will be driven more by application upgrading, regional supply-chain restructuring and industry consolidation. Producers with integrated feedstocks, reliable operating assets, global customer qualifications and differentiated specialty portfolios are likely to strengthen their positions, while smaller

producers without cost advantages or technical differentiation may face lower utilisation or market withdrawal.

Report Scope

This report studies the global Industrial Liquid Epoxy Resin production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Industrial Liquid Epoxy Resin and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Industrial Liquid Epoxy Resin that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Industrial Liquid Epoxy Resin total production and demand, 2021-2032, (Kilotons)

Global Industrial Liquid Epoxy Resin total production value, 2021-2032, (USD Million)

Global Industrial Liquid Epoxy Resin production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Kilotons), (based on production site)

Global Industrial Liquid Epoxy Resin consumption by region & country, CAGR, 2021-2032 & (Kilotons)

U.S. VS China: Industrial Liquid Epoxy Resin domestic production, consumption, key domestic manufacturers and share

Global Industrial Liquid Epoxy Resin production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Kilotons)

Global Industrial Liquid Epoxy Resin production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Kilotons)

Global Industrial Liquid Epoxy Resin production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Kilotons)

This report profiles key players in the global Industrial Liquid Epoxy Resin market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Olin, Westlake, Huntsman, KUKDO CHEMICAL, Kumho P&B Chemicals, Nan Ya Plastics, Chang Chun Plastics, Grasim Industries, Atul, Mitsubishi Chemical Group, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Industrial Liquid Epoxy Resin market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Kilotons) and average price (US$/Ton) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
