According to our (Global Info Research) latest study, the global Industrial Long Working Distance Objectives market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Industrial long working distance objectives are objective lenses designed for microscopy and imaging applications. They offer a longer distance between the lens and the specimen, allowing for the observation of larger objects or those requiring a larger working distance. These objectives typically have a large numerical aperture for improved image quality and can come with plan or flat field correction for uniform focus across the field of view. They are compatible with specific microscope systems and find applications in inspection and quality control, materials science and research, and life sciences and biology. These objectives provide flexibility and convenience in imaging objects without the need for close proximity to the specimen.
