Industrial machine assembly and disassembly is a type of specialized mechanical system used in industrial manufacturing, equipment maintenance, and automated production lines. It is primarily used for the assembly, disassembly, positioning, and maintenance of large machinery, engines, reducers, battery modules, precision components, and automated equipment. This type of equipment typically integrates robotic arms, servo drive systems, hydraulic or electric actuators, torque control modules, vision positioning systems, and intelligent control software. It can achieve functions such as automatic component gripping, precise positioning, bolt fastening, module disassembly, and online inspection, thereby improving production efficiency and reducing human error. Industrial machine assembly and disassembly equipment is widely used in automotive manufacturing, aerospace, electronic assembly, lithium batteries, new energy equipment, construction machinery, and industrial maintenance, possessing advantages such as high precision, high repeatability, flexibility, and continuous operation. With the development of intelligent manufacturing, industrial robots, and digital factories, this type of equipment is upgrading towards collaborative robotics, AI vision guidance, adaptive force control, and modular integration, and has broad market development potential in the fields of new energy vehicles, battery recycling, and high-end equipment manufacturing.
