According to our (Global Info Research) latest study, the global Industrial Castings market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Industrial casting is a process in which liquid or molten metal is poured into a mold. These molds comprise a hollow cavity of the desired shape to form complex geometrical parts. A mold can be produced from materials such as ceramic and sand plaster. Metals and alloys such as iron, aluminum, magnesium, zinc, steel, and copper are primarily used for casting.

The aluminum casting is widely used in industrial casting, henceforth, expected to expand during the forecast period due to increase in use of the automotive industry and a rise in new applications of industrial casting. Aluminum parts, metal of casting are widely used in vehicles in place of steel and iron components due to their light weight and ability to increase fuel efficiency.
