## Abstracts

According to our (Global Info Research) latest study, the global Industrial Microwave Drying Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Industrial microwave drying is a new drying method with the advantages of fast temperature rise, high energy utilization, selective heating, strong penetration, no pollution and simple control. Compared with traditional drying machine, microwave drying machine makes the material to be dried become a heating body itself, and does not require the process of heat conduction. As a result, the drying temperature can be reached in a very short time despite a material with poor thermal conductivity. No matter what the shape of each part of the object is, microwave can make the surface and inside of the object penetrate electromagnetic waves evenly at the same time to generate heat energy. Therefore, the drying uniformity is good, and the phenomenon of external burned inner raw will not appear. During the drying process, the material also can be sterilized. Microwave drying equipment is widely used, suitable for drying agricultural and sideline products, food, medicine, chemicals, building materials, minerals, rubber, paper products, textiles, wood and other materials.
