According to our (Global Info Research) latest study, the global Industrial Emergency Shutdown Systems market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An emergency shutdown system (ESD) is a safety-instrumented system that protects a manufacturing plant from explosions or leakages. Industrial emergency shutdown systems are used in the petrochemical and chemical, gas and oil, and other industries as a safety instrument system to protect the manufacturing plant from leakage or explosion. These systems are connected to sensors with PLCs to form a safety loop. The industrial emergency shutdown systems are used to shut down or halt a plant when hazardous situations like uncontrolled flooding, hydrocarbon escape etc. take place.

The system is used to activate curative output so that hazardous consequences can be alleviated. In any type of process abnormality, the industrial emergency shutdown systems are the ultimate option for protection in the industrial unit.
