According to our (Global Info Research) latest study, the global Industrial Evaporators market size was valued at USD 76790 million in 2023 and is forecast to a readjusted size of USD 107060 million by 2030 with a CAGR of 4.9% during review period.

An evaporator converts a fluid mixture from its liquid state into a gaseous state by vaporizing the liquid into a gas, leaving behind all the solid components. These evaporators are used wherever the final food item needs to be converted to a concentrated state with a negligible amount of fluid or no fluid at all (as and when required). These help in the partial removal of water from any liquid food item via the boiling process.

Such equipment helps ships to reduce their dependence on external sources for fresh water. Diesel-powered ocean liners utilize excess heat to generate fresh water, where the water used to cool the engines is passed through a heat exchanger and is subsequently cooled using concentrated seawater to yield fresh water.
