Abstracts

According to our (Global Info Research) latest study, the global Industrial Robot Expansion Card market size was valued at US\$ 259 million in 2025 and is forecast to a readjusted size of US\$ 441 million by 2032 with a CAGR of 8.3% during review period.

An Industrial Robot Expansion Card is a plug-in hardware module (I/O, motion, safety, communication, or fieldbus) installed in a robot controller or control cabinet to add additional interfaces, expand signal points, enable new industrial networks, or enhance deterministic motion/safety functions for specific automation tasks.

Upstream, semiconductor ICs, MCUs/FPGAs, PHYs, memory, ADC/DAC, connectors, magnetics, PCBs, and industrial-grade power components supply the electronic bill of materials; midstream, robot OEMs, controller vendors, and specialized industrial communication/motion card makers design, certify, and manufacture expansion cards and firmware stacks (drivers, fieldbus stacks, safety libraries) and bundle them with robot controllers or sell as options; downstream, system integrators and end-user factories deploy cards to connect robots with PLCs, sensors, actuators, safety devices, and MES/SCADA across automotive, electronics, battery, logistics, and general manufacturing cells.

Typical projects under construction and planned include robot-controller platform refreshes that add higher-speed fieldbus slots, functional-safety upgrade programs introducing new Safety I/O and safe motion option cards, migration projects replacing legacy DeviceNet/PROFIBUS cards with PROFINET/EtherNet-IP/EtherCAT, localization initiatives to qualify alternative IC and connector supply chains, new-generation remote I/O slice ecosystems for modular robot cells, AI/vision synchronization add-on card

roadmaps, and capacity expansions at automation electronics EMS lines to support growing robot shipments in China, Southeast Asia, Europe, and North America.
