Abstracts

There are six main types of industrial robots: cartesian, SCARA, cylindrical, parallel, articulated and collaborative robot. However, there are several additional types of robot configurations. Each of these types offers a different joint configuration.

Scope of the Report:

This report focuses on the Industrial Robotics in Food and Beverage in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Modern robots feature improved sanitary designs making them ideal for work in Food and Beverage industry. Smooth surfaces that are not susceptible to the corrosive effect of cleaning chemicals, and tight seals that lock out contaminants are just a couple of the safety-minded design features. SCARA (Selective Compliance Assembly Robot Arm) robots are typically used for food processing. Their low cost, small footprint, and high throughput rates make them attractive to manufacturers looking to increase their efficiency. As robots do not suffer fatigue from performing repetitive tasks, they are also an ideal solution for primary packaging tasks such as bottle handling, bin picking, and tray loading. After packaging, robots are then used to make products ready for transport. A wide variety of end of arm tools are capable of handling anywhere from single products to full rows, and even entire layers of product depending on customer needs.

The worldwide market for Industrial Robotics in Food and Beverage is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023,

from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
