There are six main types of industrial robots: cartesian, SCARA, cylindrical, parallel, articulated and collaborative robot. However, there are several additional types of robot configurations. Each of these types offers a different joint configuration.

Scope of the Report:

This report focuses on the Industrial Robotics in Rubber and Plastic in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

While impressive advancements in plastics and rubber technology have created new profit opportunities for manufacturers in the space, falling production costs and improving logistical connections have simultaneously reduced barriers to entry for competitive manufacturers in Asia, Latin America and the Near East. Flexible, scalable automation solutions offer clear advantages for plastics and rubber product manufacturers that wish to remain profitable and competitive in a dynamic industry. From production and assembly to packing and palletizing, robots play a role at every stage of the manufacturing process to improve productivity and control costs.

The worldwide market for Industrial Robotics in Rubber and Plastic is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
