There are six main types of industrial robots: cartesian, SCARA, cylindrical, parallel, articulated and collaborative robot. However, there are several additional types of robot configurations. Each of these types offers a different joint configuration.

Scope of the Report:

This report studies the Industrial Robotics Services market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Industrial Robotics Services market by product type and applications/end industries.

In order for production robots to retain their optimal efficiency and functionality, these machines should be subjected to regular inspection and preventative maintenance. It's worth noting that because robots must do their work within ordinarily predictable space and time limitations, maintaining them properly is an important part of keeping them safe for the people and equipment that must share a workspace with them. Robotics Services include Engineering and consulting, System integration, Robot programming, Installation and commissioning, Maintenance and repair and Training.

The global Industrial Robotics Services market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Industrial Robotics Services.
