According to our (Global Info Research) latest study, the global Industrial Robots for Grinding and Deburring market size was valued at US\$ 1692 million in 2025 and is forecast to a readjusted size of US\$ 2533 million by 2032 with a CAGR of 6.1% during review period.

Industrial Robots for Grinding and Deburring programmed and equipped with specialized tools (e.g., abrasive wheels, brushes) to perform material removal operations, including smoothing surfaces (grinding) and removing sharp edges or burrs (deburring) from machined parts, replacing manual, inconsistent, and hazardous labor.

The industry chain begins with upstream suppliers of core components like robot controllers, servomotors, reducers, and specialized abrasives; moves to midstream robot integrators and OEMs who design and assemble the complete robotic cell with tooling and force-sensing equipment; and ends with downstream end-user industries (e.g., automotive, aerospace) that deploy these automated cells into their production lines for finishing components like engine blocks, turbine blades, and transmission cases.

Major ongoing projects include new production lines for electric vehicle powertrain components at automotive suppliers in Europe and North America, expanded capacity for aerospace structural parts in Asia-Pacific, and greenfield investments by tier-1 parts manufacturers in automated foundries, alongside planned integrations for die-cast components in the 3C (computer, communication, consumer electronics) industry and next-generation gear manufacturing facilities.

2025 Global Market Sales Volume: Approximately 193,500 units. Average Global Market Price: \$8,500 per unit. Market Average Gross Profit Margin: 35%.
