## Abstracts

The global Industrial Rubber Hoses market size is expected to reach \$ 38736 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

In 2025, global sales of industrial rubber hoses reached 8.2 million tons, with an average selling price of US\$3,200 per ton. Industrial rubber hoses are fundamental industrial components made of rubber with reinforcing layers to achieve pressure resistance, wear resistance, and media transport capabilities. They are widely used in fluid transport systems in engineering machinery, mining and metallurgy, petrochemicals, agricultural irrigation, automobiles, and manufacturing. Upstream raw materials mainly include natural rubber, synthetic rubber (NBR, EPDM, SBR), steel wire or fiber reinforcement materials, and carbon black additives; midstream processes include compounding, extrusion, vulcanization, and assembly; downstream customers include engineering machinery manufacturers, energy and chemical companies, and equipment manufacturers. In 2025, global total capacity was approximately 9.6 million tons, with an industry capacity utilization rate of approximately 85% and an overall gross profit margin of approximately 20%?26%. Demand and opportunity analysis indicates that continued expansion in infrastructure investment, new energy, and high-end equipment manufacturing is driving steady demand growth. Future growth lies in high-pressure resistant, high-temperature resistant, corrosion-resistant, and lightweight rubber hoses, as well as high-value-added products for new energy, deep-sea engineering, and intelligent manufacturing.
