Abstracts

Rubber refers to elastomeric compounds that consist of various monomer units forming polymers that are heat cured (vulcanized). Polymers are long molecular chains that are connected together (cross-linked) to improve their toughness and resilience. Rubber industry is more than 100 years old. Industrial rubber industry is dominated by one major product tires.

According to our (Global Info Research) latest study, the global Industrial Rubber market size was valued at USD 24610 million in 2022 and is forecast to a readjusted size of USD 31000 million by 2029 with a CAGR of 3.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The use of industrial rubber in the automotive, building & construction, and other applications is expected to increase in the Asia Pacific region, followed by South America and the Middle East & Africa regions over the next 5 years. This growth in the use of the industrial rubber can be attributed to the increasing population and the growing disposable income in these regions. Based on type, the synthetic rubber segment is expected to grow at the highest CAGR between 2017 and 2022, in terms of value.
