Fire hoses use high-pressure water, and other hydrant measures such as foam to extinguish a fire. They are either attached to a fire engine or a hydrant. A fire hydrant, also called a fireplug, is a connection point by which firefighters can tap into a water supply. It forms one of the components of active fire protection.

The latest trend is the use of the fire hydrants that consume less water by plugging the leaks. One such solution for the problem of leakage is provided by Echologics. The provides solutions for leakages in fire hydrant systems. It specializes in software and sensors, which can locate leaks with a two-meter accuracy. These sensors are attached to above-the-ground water mains, pipes, or fire hydrants and eliminate the need for ground excavations.
