According to our (Global Info Research) latest study, the global Industrial Safety Sensors market size was valued at USD 468.8 million in 2023 and is forecast to a readjusted size of USD 557.9 million by 2030 with a CAGR of 2.5% during review period.

Safety sensors are able to reduce the typical risks associated with machinery and equipment. Together with the appropriate safety control units, active photoelectric protective devices such as safety thru-beam sensors and safety light grids ensure that a stop is applied on detection of unauthorized access or if someone reaches into a danger zone.

Personnel protection is becoming increasingly important in automated processes. Wherever machines perform high-risk movements, the relevant health and safety regulations must be observed. Even if the operator is momentarily distracted, shearing, crushing, and impact injuries must be prevented. Here is the place that safety sensor comes to use.
