Industrial-scale AEM (Anion Exchange Membrane) electrolyser is a large-capacity system designed for efficient hydrogen production in various industrial applications. It employs an anion exchange membrane that facilitates hydroxide ion conduction, enhancing energy efficiency and reducing operational costs compared to traditional methods. These electrolysers utilize non-precious metal catalysts, lowering material expenses and promoting sustainability, while effectively integrating with renewable energy sources for green hydrogen production. Their modular design allows for scalability based on production needs, and they are robustly constructed to withstand industrial conditions, making them suitable for sectors like energy, chemical manufacturing, and decarbonization efforts.
