Abstracts

According to our (Global Info Research) latest study, the global Industrial Scanners market size was valued at USD 1971.8 million in 2023 and is forecast to a readjusted size of USD 2749 million by 2030 with a CAGR of 4.9% during review period.

There are a few different kinds of scanners in the world. The most common types are flatbed scanners, sheet fed scanners, photo scanners, and portable scanners.

Flatbed scanners will take up some desktop space but provide a lot of bang for the buck. Depending on its size, a flatbed scanner can fit standard or legal-sized documents, and the flexible cover allows you to scan large items such as books. Photo scanners include specialized technology so that they can deal with slides and negatives; they also have built-in software to clean up old photos. A bar code reader (or bar code scanner) is an electronic device that can read and output printed barcodes to a computer. Like a flatbed scanner, it consists of a light source, a lens and a light sensor translating optical impulses into electrical ones. A 3D scanner is a device that analyses a real-world object or environment to collect data on its shape and possibly its appearance (e.g. colour). The collected data can then be used to construct digital three-dimensional models.
