Abstracts

The global Industrial Segmented Ball Valve market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The main structure of the segmented valve is a barrel structure. There is an inclined leaky nozzle inside to guide the flow. The water is diverted internally through the water distribution shaft. It is controlled by segmented motors and photoelectric tubes. The indexing plate can monitor the operation of the device. Monitoring, the rotation of the segmented motor drives the water dividing shaft and the indexing plate to rotate. When the water dividing shaft rotates to different positions, its inclined leaky mouth is aligned with the different outlets of the multi-channel water outlet bucket.
