Abstracts

A semiconductor material has an electrical conductivity value falling between that of a conductor ? such as copper, gold etc. ? and an insulator, such as glass. The industrial semiconductors are all used in industrial application.

SCOPE OF THE REPORT:

This report focuses on the Industrial Semiconductors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Many industries, from construction to healthcare, could adopt AI technology to improve efficiency and reduce costs. That could boost the earnings of Intel (INTC), Nvidia (NVDA), and Cypress Semiconductor (CY).

The shift to a 10 nm (nanometer) node by Intel, which could put it back in a technological advantage. Taiwan Semiconductor Manufacturing (TSM) and Samsung could also shift to a 7 nm node, but that would be equivalent to Intel's 10 nm node. The move to a smaller node could bring significant cost savings and improve the performance of the chips.

The another development for the semiconductor industry is the onset of level-three autonomous vehicles on the road. Google's (GOOG) Waymo plans to commercially launch its autonomous ride-sharing service as early as 2018. Nvidia expects its Drive PX 2 platforms that deliver level-three autonomy to power some models of Tesla (TSLA) and Toyota (TM). There could be some strong growth in Intel's and Nvidia's automotive revenue in 2018.

The worldwide market for Industrial Semiconductors is expected to grow at a CAGR of

roughly 12.3% over the next five years, will reach 90300 million US\$ in 2023, from 45000 million US\$ in 2017, according to a new GIR (Global Info Research) study.
