According to our (Global Info Research) latest study, the global Industrial Serial EEPROM market size was valued at US\$ 221 million in 2025 and is forecast to a readjusted size of US\$ 356 million by 2032 with a CAGR of 7.1% during review period.

Industrial Serial EEPROMs are non-volatile serial memory devices applied in industrial automation, instruments and data acquisition systems, which store critical data, configuration parameters and firmware. They can retain data after power loss, and feature high stability, strong anti-interference performance and wide operating temperature range, ensuring the long-term stable operation of industrial equipment.

Their prices vary according to storage capacity, package type, operating grade and order quantity. Industrial-grade and automotive-grade products are more expensive than commercial-grade ones, and discounts are available for bulk purchases. The industrial chain is well-established. The upstream supplies wafers, photoresists, packaging materials and other raw materials. The midstream covers chip design, wafer fabrication, testing and packaging. The downstream serves manufacturers of industrial control devices, instruments and automation systems, forming a complete industrial chain.
