According to our (Global Info Research) latest study, the global Industrial Shaker Dust Collector market size was valued at USD 704.8 million in 2022 and is forecast to a readjusted size of USD 946.8 million by 2029 with a CAGR of 4.3% during review period.

Shaker dust collectors are a shake-cleaning baghouse system. The system either cleans off-line when the airflow is temporarily halted or sections the baghouse into compartments. A compartmented design offers continuous cleaning of the unit while allowing for the individual compartments to be taken offline for servicing. These units are common where it is impractical to supply compressed air for bag cleaning, as in foundries, steel mills, the mining industry, power plants, and smelting industries. They are also used where dry material is stored in silos and other bulk storage containers.
