Abstracts

Industrial silica sand is well-rounded, well-sorted, sand consisting of almost pure quartz, or silicon dioxide. Industry silica sand is the most commonly used sand which is made by either crushing sandstone or taken from natural occurring locations, such as beaches and river beds.

Scope of the Report:

This report focuses on the Industrial Silica Sand in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The whole market is growing due to the development of frac sand from 2012 to 2022. The industry's rapid expansion pace slowed to a crawl in 2015. The industrial silica sand market is consolidated in nature. Various players are adopting competitive strategies such as collaborations, acquisitions and capitalizing untapped opportunities in the World, to sustain and gain market penetration.

Globally, the Industrial Silica Sand industry market is low concentrated. And some enterprises, like Unimin Corporation, Fairmount Minerals, and U.S. Silica are well-known for the wonderful performance of their Industrial Silica Sand and related services. At the same time, China, occupied 37.41% sales market share in 2016, is remarkable in the global Industrial Silica Sand industry because of low cost of raw material and labor.

The sales of Industrial Silica Sand are related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of Industrial Silica Sand industry may not keep that fast. But it is

surely forecasted that the market of Industrial Silica Sand is still promising.

The product average price declined in the past few years due to the technology development, the average price will keep the trend in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

With emerging economies growing faster, a strategy has been adopted by most leading vendors in the Industrial Silica Sand market to approach these areas. QYR analysis of the Industrial Silica Sand market indicated that China would account for the highest sales in 2022 with close to 38 percent of global sales coming from this region.

Although the market competition of Industrial Silica Sand is fierce globally, there are many enterprises can obtain considerable profit from the manufacturing and marketing of Industrial Silica Sand and that is the reason that we believe there will also be enterprises enter this market. But it is suggested that enterprises those have plans to enter this industry have careful analysis of this market and the advantages or disadvantages of themselves.

The worldwide market for Industrial Silica Sand is expected to grow at a CAGR of roughly 1.2% over the next five years, will reach 12300 million US\$ in 2023, from 11400 million US\$ in 2017, according to a new GIR (Global Info Research) study.
