According to our (Global Info Research) latest study, the global Industrial Gear Oil market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Gear oil is made up of base oil and additives. Base oil is made up of petroleum fractions and additives impart desirable properties such as reduced friction, increased viscosity and corrosion protection.

Gear oil with high pressure additives will protect the gear surfaces against extreme pressures to prevent unnecessary wear and tear. Gear oils also prevents thickening and formation of varnish or sludge in high speed gears. In addition to this, gear oils fight contamination that enters the system, especially water. The oil demulsifies and allows the easy removal of water.
