Abstracts

The Spray Valves are designed for precise spray applications of low viscosity materials. An external stroke control makes it easy for the operator to fine-tune fluid flow. Total control of the spray cycle is provided by adjustable fluid flow and precise control of prespray, atomizing air and post spray with the Digital Controller.

Scope of the Report:

This report focuses on the Industrial Spray Valves in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Spray Valves are used for three purposes: to distribute a liquid over an area, to increase liquid surface area, and create impact force on a solid surface. Spray valves can be categorized based on the energy input used to cause atomization, the breakup of the fluid into drops. Spray valves can have one or more outlets; a multiple outlet valve is known as a compound valve. Spray valves range from heavy duty industrial uses to light duty spray cans or spray bottles.

The worldwide market for Industrial Spray Valves is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
