According to our (Global Info Research) latest study, the global Industrial Thiourea market size was valued at US\$ 153 million in 2025 and is forecast to a readjusted size of US\$ 224 million by 2032 with a CAGR of 5.7% during review period.

Thiourea, a white bright bitter crystal, is soluble in cold water, ethanol, and slightly soluble in ether. It is easily deliquescent in air and transforms into ammonium thiocyanate at 150 °C. It has reducibility and can reduce free iodine to iodide ions. Thiourea is highly reactive and is used to prepare various compounds. It can react with various oxidants to produce organic compounds, and can also form easily soluble addition compounds with inorganic compounds. Thiourea has broad application prospects in petrochemical and pharmaceutical industries. Many pharmaceutical molecules contain structural fragments of thiourea, which is also an important intermediate for the synthesis of heterocyclic compounds. For example, many oral hypoglycemic and antithyroid drugs currently on the market belong to thiourea molecules. In addition, thiourea compounds have excellent insecticidal activity and are widely used in the field of pesticides.
