Industrial tomato harvester is a kind of agricultural machinery equipment used for large-scale harvesting of tomatoes. It usually consists of parts such as manipulators, conveyor belts and tomato collection boxes. The robot arm has intelligent perception ability, can identify ripe tomatoes and leaves, and pick tomatoes precisely. The conveyor belt is responsible for quickly transporting the picked tomatoes to the collection box to maintain the continuity and efficiency of tomato picking. The working principle of the industrial tomato harvester is based on advanced optical recognition technology. The manipulator accurately identifies and locates ripe tomatoes through infrared sensors and image processors. Once the robot has identified the target, its precise cutters quickly remove the tomatoes from the vine and send them to a collection box via a conveyor belt.
