An industrial trackball is a trackball input device specifically designed for industrial environments. The casing is typically made of metal or phenolic resin with excellent chemical stability, and the trackball and buttons feature high operational precision to adapt to the working environment. Therefore, it possesses a series of characteristics suitable for harsh industrial environments, including waterproofing, dustproofing, oil resistance, corrosion resistance, anti-interference, and shock resistance, allowing it to operate normally in extreme industrial conditions such as temperature, humidity, dust, and oil contamination. Its internal circuit design is also more complex and stable, enabling it to function properly in complex industrial electromagnetic environments, and it is compatible with various industrial standard interfaces in terms of connectivity.
