In 2025, the global production capacity of Industrial Truck Brake System was approximately 3.95 million sets.

Industrial Truck Brake System refers to braking assemblies used in heavy-duty industrial vehicles such as forklifts, terminal tractors, mining trucks, warehouse trucks, port vehicles and off-highway material handling equipment. It includes hydraulic, pneumatic, mechanical or electric braking components that provide stopping force, parking safety and load control. The product may include brake calipers, drums, discs, pads, master cylinders, actuators, valves and control units. The market excludes passenger car brake systems, ordinary bicycle brakes and complete industrial trucks.

The industry chain includes cast iron, steel, friction materials, rubber seals, hydraulic components, electronic controls, sensors, machining parts, brake fluids and testing equipment. Midstream production covers casting, machining, friction material bonding, hydraulic assembly, control integration, pressure testing, durability testing and final inspection. Downstream demand comes from forklift manufacturers, warehouse equipment producers, port machinery, mining vehicles, industrial vehicle fleets and

aftermarket repair channels. Growth is driven by logistics automation, warehouse expansion, port equipment renewal, safety standards and replacement of worn brake components.

Industrial Truck Brake System is the core safety component of industrial vehicles. It features reliable braking and strong load adaptability. Logistics and industrial transportation growth boost demand. The system will combine intelligent monitoring and lightweight components.
