Abstracts

According to our (Global Info Research) latest study, the global Industrial USB Cameras market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The term 'USB camera' implies that an industrial camera is connected to a computer via a USB interface. It transfers the parameters, which are used to set the camera, as well as the image data. Actually, this statement is trivial. We emphasize it, since a lot of people read too much into it. One of the common misconceptions is the association of 'USB camera' with 'low image quality'. But actually, the image quality is determined by the CCD sensor or CMOS sensor. The USB interface simply transfers the images taken by these sensors.
