A gasket is a mechanical seal which fills the space between two or more mating surfaces, generally to prevent leakage from or into the joined objects while under compression.

Scope of the Report:

This report focuses on the Industrial Valve Cover Gasket in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. A valve cover gasket helps seal the joint between the rocker cover and the rest of the engine. Failure of this gasket can cause oil to leak from the engine. There are many different types of valve cover gaskets. Some are made of rubber, some of cork, some are made of polymers or even from fibres. Most gaskets will be damaged when dismantled, so they will have to be replaced every time the valve cover is removed.

The worldwide market for Industrial Valve Cover Gasket is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
