## Abstracts

According to our (Global Info Research) latest study, the global Industrial Varifocal Lens market size was valued at US\$ 325 million in 2024 and is forecast to a readjusted size of USD 562 million by 2031 with a CAGR of 8.1% during review period.

An industrial varifocal lens is a type of lens with an adjustable focal length within a certain range. Its focal length can be changed via mechanisms such as a zoom ring that can be rotated clockwise or counter - clockwise. It can maintain a stable magnification after a change in the working distance or obtain different magnifications when the working distance remains unchanged to meet various imaging requirements. Moreover, the imaging surface size of the lens must be larger than the target surface of the CCD camera it is paired with, and its resolution should match the pixel size of the camera, enabling the system to fully utilize the resolution accuracy of the CCD camera and achieve optimal cost - effectiveness.
