According to our (Global Info Research) latest study, the global Industrial Vehicle Collision Avoidance System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

An industrial vehicle collision avoidance system (IVCAS) is a safety system that uses sensors and software to detect and prevent collisions between industrial vehicles. IVCAS systems are typically used in warehouses, factories, and other industrial settings where there is a high risk of collisions.

IVCAS systems typically use a variety of sensors to detect objects and vehicles in the environment. These sensors can include radar, lidar, ultrasonic, and cameras. The software then uses this information to determine if a collision is imminent. If a collision is imminent, the system will alert the driver of the vehicle and take corrective action, such as braking or steering.

IVCAS systems can help to prevent collisions and injuries in industrial settings. They can also help to improve efficiency by reducing the amount of time that is spent on accidents and investigations.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90%

of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
