## **Abstracts**

Industrial vehicles are vehicles that are used for different industrial purposes, such as loading, lifting, and movement of loads. For medium-distance movement of loads, powered vehicles such as lift trucks are used where the load is batched in parts in either a container or a pallet. In case of short-distance transport, manual or semi-powered carts are used. These vehicles are only capable of moving one load at a time from one place to another. However, there are multiple load transporters that can move more than one load at a time, from one or more sources to the preferred destination.
