A industrial vibratory sieve is a device used to separate particles by size through a vibrating motion. It consists of a screen or mesh that is vibrated at high speeds, causing materials to move across the screen. As the materials move, smaller particles pass through the mesh, while larger particles remain on top. This type of sieve is widely used in industries such as food processing, pharmaceuticals, chemicals, and mining for sorting and classifying materials efficiently and with precision. The vibration helps to prevent clogging and ensures a continuous and consistent sieving process.
