Industrial wastewater treatment technology refers to the processes, methods, and systems employed to treat and purify wastewater generated by industrial processes and activities. The objective of industrial wastewater treatment is to remove contaminants, pollutants, and harmful substances from the wastewater, making it safe for discharge into the environment or, in some cases, suitable for reuse within the industrial facility. This technology is crucial for minimizing the environmental impact of industrial activities and ensuring compliance with regulatory standards.

Membrane-based processes, such as ultrafiltration and reverse osmosis, continue to evolve, becoming more efficient and cost-effective. These technologies are increasingly used for the removal of contaminants, including dissolved solids and pathogens.
