Industrial winches are mechanical devices used to pull a heavy load, typically horizontally. They are used to pull in, let out, or otherwise adjust the tension of a rope or cable. Simple designs consist of a rope or cable wound around a drum or barrel. The drum rotates in a horizontal axis and may be powered by steam, a hydraulic motor, or an electric motor. Industrial winches are designed to move heavy loads and come in a variety of configurations. Most winch drums are made of fabricated steel and designed for a specific loading capacity.
