The global Industrial Woven Wire Mesh market size is expected to reach \$ 2142 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Industrial woven wire mesh is a functional metal material made by weaving metal wires into a specific structure. It can perform functions such as filtration, separation, reinforcement, and protection, and possesses high mechanical strength, corrosion resistance, and dimensional stability. It is widely used in mining, chemical, construction, energy, food processing, and environmental protection industries. The industrial woven wire mesh industry chain includes upstream raw materials such as stainless steel wire, carbon steel wire, aluminum wire, and alloy wire; midstream processes such as wire drawing, weaving, surface treatment, cutting, and quality inspection; and downstream applications involving industrial filtration and screening equipment, building reinforcement, protective facilities, and process equipment, along with customized design, technical consulting, logistics, and after-sales service to meet the performance and durability requirements of different industrial conditions. In 2025, the global production of industrial woven wire mesh was approximately 592,000 tons, with a global average market price of approximately US\$2,500 per ton. The gross profit margin of major companies in the industry is between 30% and 45%. In 2025, the global production capacity of industrial woven wire mesh was approximately 800,000 tons.
