Industry cloud AI is a product of the deep integration of cloud computing and artificial intelligence. It refers to an intelligent cloud service paradigm that is tailored to specific industry scenarios and deeply embedded with industry knowledge and business logic. It uses an AI industry cloud platform as its foundation and a large industry model as its intelligent engine, achieving a closed loop of technology, data, applications, and business value through a platform-based approach. It provides high-quality data "fuel," with the platform aggregating long-accumulated real business data and industry knowledge graphs, constructing a secure and compliant operating environment, and meeting the data compliance requirements of highly sensitive industries such as finance and healthcare through private or hybrid deployment. Finally, it bridges the "last mile" between AI and business, deeply integrating AI capabilities into core enterprise business processes. Application scenarios have covered multiple fields such as industrial quality inspection, intelligent risk control, smart energy, and smart education.
