According to our (Global Info Research) latest study, the global Inertia Base Frames market size was valued at US\$ 694 million in 2024 and is forecast to a readjusted size of USD 862 million by 2031 with a CAGR of 3.3% during review period.

Inertial base frames are structures designed specifically to support mechanical equipment. They reduce vibration, provide mounting points for vibration isolators, prevent relative motion of components, lower the center of gravity to reduce sway, reduce motion during startup and shutdown, reduce the reaction forces generated by operating loads, and serve as a sound barrier. They are widely used to support equipment such as centrifugal chillers, compressors, pumps, fans and internal combustion engines. The unique design combines concrete and steel to achieve a high-strength, high-rigidity and lightweight load transfer system.
