According to our (Global Info Research) latest study, the global Inertial Motion Capture Gloves market size was valued at US\$ 126 million in 2024 and is forecast to a readjusted size of USD 341 million by 2031 with a CAGR of 13.2% during review period.

Inertial Motion Capture Gloves are high-tech device that integrates inertial sensors, microprocessors and data transmission technology. It uses built-in sensors to capture the subtle movements of hands and fingers in real time, uses the inertial navigation principle to calculate the position and posture information of the hands, and converts these data into three-dimensional hand motion data that can be used in animation production, game development, robot training and other fields. This glove has the characteristics of high precision, strong real-time performance, good comfort and strong compatibility. It can provide users with an immersive interactive experience and plays an important role in many fields.
