Abstracts

An inertial navigation system (INS) is a navigation aid that uses a computer, motion sensors (accelerometers), rotation sensors (gyroscopes), and occasionally magnetic sensors (magnetometers) to continuously calculate by dead reckoning the position, the orientation, and the velocity (direction and speed of movement) of a moving object without the need for external references. It is used on vehicles such as ships, aircraft, submarines, guided missiles, and spacecraft.

Scope of the Report:

This report focuses on the Inertial Navigation System (INS) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America is estimated to lead the global INS market in 2018. The US has a major market share in missiles along with a most profitable aviation industry, thus North America is expected to fuel the growth of the market. Major aircraft manufacturers present in North America are Boeing (US), Bombardier (Canada), Lockheed Martin (US), Bell Helicopter (US), and Sikorsky Aircraft (US), and therefore generate a high demand for the inertial navigation system. North America is expected to continue to lead the market during the forecast period.

The worldwide market for Inertial Navigation System (INS) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
