Inertization controller is a device used to manage and monitor the level of inert gas in the fuel tank or other enclosed space. Inert controllers are often used in aerospace applications, especially aircraft fuel systems, to help prevent explosions or fires caused by flammable gas accumulation. Inert controller works by introducing inert gas (usually nitrogen or argon) into fuel tank or other enclosed space. Inert gas replaces any flammable gas that may exist, thus reducing the risk of combustion. Inertization controller monitors the gas level and controls the flow of inert gas to maintain a safe concentration.
