According to our (Global Info Research) latest study, the global Infant Radiant Warmer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Infant Radiant Warmer is a bed for stabilizing the body temperature of a newborn or premature infant. It has a heat source positioned above the baby to keep his or her temperature constant. In detail, the infant radiant warmer is a mobile, battery powered device that addresses severe heat loss suffered by some infants by allowing the infant's bed to be uniformly heated. This is done by infrared radiation (IR) from a quartz heater that is beamed by a parabolic reflector uniformly over an infant's bed. The device has a sensitive thermostat that does not require calibration to use it. The control panel can sense the infant's temperature quickly through the use of a highly sensitive thermistor probe.

In the US market, the leading manufacturers of infant radiation warmers are GE Healthcare, Drager, Natus Medical, Advanced, Atom Medical, Fisher & Paykel, Phoenix Medical, and JW Medical, among others, with GE Healthcare leading the industry with a 61 percent market share.
