Infectious Waste Disposal Service refers to the professional handling, treatment, and safe elimination of waste materials that pose a biological hazard due to the presence of pathogens capable of causing infections in humans or animals. This type of waste includes items like used needles and syringes, contaminated gloves and gowns, blood-soaked materials, laboratory cultures, and body parts or fluids generated in healthcare, veterinary, or research settings. Specialized disposal services ensure that such waste is collected, transported, treated—typically through incineration, autoclaving, or chemical disinfection—and ultimately disposed of in compliance with strict environmental and public health regulations. These services are essential for preventing the spread of infectious diseases, protecting healthcare workers and sanitation personnel, and maintaining sanitary conditions in medical and public facilities.
