## Abstracts

The global InfiniBand Cables market size is expected to reach $ 2407 million by 2032, rising at a market growth of 14.6% CAGR during the forecast period (2026-2032).

InfiniBand Cables are high-speed data transmission cables specifically designed for InfiniBand networking environments, enabling low-latency and high-bandwidth interconnects between servers, switches, storage systems, and computing nodes in high-performance computing (HPC), artificial intelligence (AI) data centers, cloud computing, and enterprise data centers. These cables support advanced InfiniBand standards such as HDR (200Gb/s), NDR (400Gb/s), and next-generation XDR (800Gb/s), and are available in various forms including Direct Attach Copper (DAC) cables, Active Optical Cables (AOC), and fiber optic cable assemblies. InfiniBand cables are critical components in large-scale GPU clusters because they provide efficient communication between computing nodes, helping improve distributed training performance, reduce network latency, and maximize overall system efficiency.

In 2025, global InfiniBand Cables production reached approximately 1.5 million units, and average price was 800 USD/unit, with gross margin 35%.
